SUMMARY

Versatile technology professional with practical experience spanning Front-End Development, Business Analysis, System Analysis, Software Testing, and software implementation. Experienced in understanding business needs, analyzing processes and requirements, translating them into practical software solutions, and contributing to their implementation and validation.

Hands-on experience with React, JavaScript, TypeScript, HTML, CSS, and C#, supported by a strong foundation in Object-Oriented Programming, Data Structures, Databases, and software development fundamentals.

Experienced in working with development teams, clients, and stakeholders across projects in government, HR, retail, real estate, agriculture, technology, and sales operations. Strong ability to combine technical understanding with business and analytical thinking to identify problems, improve processes, validate solutions, and support informed decision-making.

EDUCATION

Faculty of Computers and Information – Mansoura University Mansoura, Egypt

Bachelor's Degree, Relevant academic foundation:, Programming, Object-Oriented Programming, Data Structures, Databases, Software Engineering, Computer Science Fundamentals *Graduated: June 2024*

EXPERIENCE

Software Development & Business/System Analysis Sep 2024 – Present

Merge Digital Solution *Egypt*

- Analyze business requirements and translate business needs into clear functional and technical requirements for development teams.
- Participate in the analysis, design, implementation, testing, and delivery of software systems across different business domains.
- Contribute to Front-End development using React, JavaScript, and TypeScript.
- Work closely with developers to clarify requirements, system workflows, business rules, and expected system behavior.
- Analyze business processes and operational requirements to identify problems and propose practical software solutions.
- Communicate directly with clients and stakeholders to understand requirements, clarify business needs, and follow up on implementation.
- Review developed features and user interfaces to ensure they meet business requirements and expected user experience.
- Perform functional and system testing, identify defects, validate fixes, and verify completed features before delivery.
- Analyze business and sales data in selected projects to identify trends, performance gaps, and opportunities for improvement.
- Contribute to software projects across multiple industries while adapting analysis and implementation approaches to different business requirements.
- Use AI-powered tools to support research, technical problem-solving, software development, analysis, and productivity.

PROJECTS

Human Resources Management System | Business Analysis | System Analysis | Technical Implementation

- Contributed to the initial technical concept and implementation of an internal HR management system.

- Analyzed employee performance and operational efficiency after system deployment.
- Evaluated employee-related information to identify performance patterns and areas requiring management attention.
- Prepared analytical reports and insights to support management decision-making.
- Connected system functionality with actual operational requirements and business processes.

Government Systems | System Analysis | Software Development | Testing
- Contributed to the implementation of multiple government-related software systems.
- Analyzed requirements and system workflows to support accurate implementation.
- Worked with development teams to clarify functionality and resolve requirement-related issues.
- Participated in functional testing and feature validation.
- Reviewed implemented functionality against defined business and system requirements.

Stores & Outlets Management System | Technical Implementation | Business Analysis | Sales Analysis
- Contributed technically to the implementation of a system supporting company stores and outlets.
- Worked with operational workflows and system functionality related to store management.
- Analyzed sales figures and business performance after system implementation.
- Compared outlet performance to identify trends and differences in sales efficiency.
- Provided business insights to support management decisions.

Real Estate Development System | Technical Implementation | Business Analysis | Market Analysis
- Contributed to the technical implementation of a system for a real estate development company.
- Analyzed sales figures and company performance after system deployment.
- Evaluated the company's market reach and performance within the real estate sector.
- Analyzed target-market characteristics and business opportunities.
- Used business findings to support decision-making and identify potential system improvements.

Agriculture Company System | Technical Implementation | Business Analysis | Market & Sales Analysis
- Contributed to the implementation of a business system for an agriculture company.
- Analyzed sales performance, business figures, and product-related information.
- Evaluated target-market characteristics and customer needs.
- Analyzed product performance and market potential to support product-related decisions.
- Translated business observations into potential technical and system improvements.

Technology Company – Business & Product Analysis | Business Analysis | System Analysis | Problem Solving
- Analyzed proposed technology and software development ideas from both business and technical perspectives.
- Evaluated business needs, market opportunities, available information, and potential challenges.
- Identified business problems that could be addressed through software solutions.
- Assessed potential solutions and translated business problems into technical concepts.
- Collaborated with technical teams to evaluate solution feasibility and implementation requirements.

Egyptian Traffic Units Sales Analysis | Business Analysis | Sales Analysis | Performance Analysis
- Analyzed sales data related to Egyptian traffic-unit operations.
- Compared sales performance across different governorates.
- Evaluated sales efficiency across individual outlets within traffic units.
- Identified performance differences and business trends.
- Generated insights that could support performance evaluation and management decisions.

TECHNICAL SKILLS

Requirements Gathering & Analysis
Business Process Analysis
Functional Requirements
System Analysis & Design
Workflow Analysis
Business Problem Identification

Solution Definition
Stakeholder & Client Communication
Business & Market Analysis
Data-Driven Decision Support
React.js
JavaScript
TypeScript
HTML5
CSS3
Responsive Web Development
Component-Based Development
API Integration
UI Implementation
UI/UX Collaboration
Functional Testing
System Testing
UI Testing
Test Scenario Design
Requirements Validation
Bug Identification & Reporting
Feature Validation
Release & Acceptance Testing
Object-Oriented Programming
Data Structures
Database Design & Fundamentals
Programming Fundamentals
Software Development Life Cycle
Modern Software Development Practices
AI-Assisted Development
AI-Based Research & Problem Solving
AI-Assisted Code Generation & Review
Development Productivity & Automation
AI Tools for Technical & Business Analysis
C#
Requirements Engineering
Software Testing

GitHub
AI-Assisted Development Tools
Modern Development Tools

FRONT-END DEVELOPMENT

Develop and implement modern web interfaces using React.js. Build reusable, component-based user interfaces. Use JavaScript and TypeScript to implement application logic and interactive functionality. Create responsive interfaces using HTML5 and CSS3. Integrate front-end applications with APIs and back-end services. Translate UI/UX designs and requirements into functional web interfaces. Review interfaces for usability, responsiveness, consistency, and requirement compliance. Apply modern development practices to maintain clean and scalable front-end code.

BUSINESS & SYSTEM ANALYSIS

Gather and analyze business requirements. Identify business processes, workflows, and system needs. Translate business requirements into functional system requirements. Analyze system workflows and user interactions. Identify business problems and evaluate software-based solutions. Define system behavior from both business and user perspectives. Bridge communication between business stakeholders and technical development teams. Analyze operational and sales data to support business decisions. Evaluate market, customer, and business requirements. Validate implemented solutions against business requirements. Participate in system testing and acceptance activities.

SOFTWARE TESTING & QUALITY

Design and execute functional test scenarios. Validate features against business and system requirements. Perform UI and usability testing. Identify, analyze, and report software defects. Verify bug fixes and feature updates. Perform regression and system-level validation where required. Participate in release and acceptance testing. Review applications from both technical and end-user perspectives. Collaborate with developers to investigate and resolve implementation issues.

AI & MODERN DEVELOPMENT

AI-Assisted Software Development AI-Based Research & Problem Solving AI-Assisted Code Generation and Review AI-Powered Technical Analysis AI Tools for Business & Requirements Analysis Development Productivity & Automation Modern AI-Powered Development Workflows

TRAINING & INTERNSHIP

Web Development Training — Faculty of Computers and Information – Mansoura University Successfully completed practical web development training.

S3SS Internship Completed a practical internship during university, gaining experience in software and web development activities.

PROFESSIONAL STRENGTHS

Analytical Thinking Problem Solving Technical & Business Perspective Requirements Understanding Client & Stakeholder Communication Cross-Functional Collaboration Attention to Detail Fast Learning & Adaptability Technical Communication Quality-Oriented Mindset
